- BB Assignment
- Prepare for Q and A
- Check the backlog template

[Code of Conduct]

Describe in more details what to implement

Learning goals (not only grade related)

Concrete days of meetings

Basic values (respect each other, etc..)

Add explicitly about the fact that the person who disagrees should be considered during the decision.
Examples (steps) of resolving the conflict

Add stuff to the code of conduct
(evolve if needed)

Sho

[Backlog]

Add core functionalities
(e.g. should be able to connect to
the server,
be able to be in a game,
answer the questions, etc
#3 and #23 are redundant with
each other (or reword them)

[API endpoints].
Create one (e.g. GET (the easiest))
by the end of this week, but better
more than 1.

GITLAB TIPS

1 person per issue preferably

Description of an issue:
- checklist
- suggested solution for the person who works on it;
- amount of time estimated to resolve,
- create milestones for the sprints (multiple issues)
- labels can contain "feature", "backend", etc.

Issue boards (everything that's done, being worked on, etc...)

Should be the same amount of merge requests approved and made

Leave a comment to the request if disagree
(or even pull and make code-comments)

Reply through the GITLAB (especially merge request reviews!)

Don't approve too quickly.

Every pipeline before merging should be completely green. If it fails, fix immediatly

1 Issue per week per person (at least)
Immediatly add them not to forget (as issues).

By the next week:
1) HCI report
2) All the videos up to date
3) One API endpoint
4) Assignment 3B (Q and A preparation)
